

FENICE

FENICE_Lifestyle

La fenice, un uccello dal piumaggio roseo e dorato si presume possa vivere da 500 fino a 1461 anni. Alla fine della sua vita la fenice costruisce un nido di ramoscelli di cannella lasciando che i raggi del sole lo incendiano. Entrambi, fenice e nido bruciano fino a ridursi in cenere, dalla quale una nuova fenice risorge. La nuova fenice è destinata a vivere solitamente tanto quanto colei che la ha preceduta. La nuova fenice imbalsama le ceneri della precedente in un uovo fatto con della mirra e vola a depositarlo nella città sacra di Eliopoli. • Said to live for 500 or 1461 years the Phoenix is a bird with gold and red plumage. At the end of its life cycle the phoenix builds itself a nest of cinnamon twigs that it then ignites; both nest and bird burn fiercely and are reduced to ashes, from which a new young phoenix arises. The new phoenix is destined to live, usually, as long as the old one. The new phoenix embalms the ashes of the old phoenix in an egg made of myrrh and deposits it in the Egyptian city of Heliopolis.
